Special Pricing for Mycotoxin analysis for the 2009 growing season

The 2009 growing and harvesting season is quickly becoming one of the most challenging seasons we have witnessed in many years. Cool, wet growing conditions, hail damage, and delayed harvest all add up to difficulties that will need to be addressed.

Given the growing concern over Molds and Mycotoxins in this year's crop, we are providing "special pricing" for Mycotoxin analysis in "grains". We will be using the "USDA Grain Inspection" approved method for this special pricing.

	Regular Pricing	Special Fall 2009 Pricing
Vomitoxin (DON)	\$30.00/sample	\$22.00/sample
Zearalenone	\$38.00/sample	\$30.00/sample
T-2 Toxin	\$38.00/sample	\$30.00/sample
Aflatoxin	\$30.00/sample	\$22.00/sample
Any three toxins package	\$ 98.00/sample	\$79.00/sample
Any four toxin package	\$136.00/sample	\$109.00/sample

** The special pricing applies only to grains, specifically Corn, Wheat, Barley, DDGS, and Soybeans etc.

****Special pricing will run until further notice. This program will be reevaluated periodically****

Please note that all of the Molds and Mycotoxins analyses are performed with-in Dairyland Laboratories by Microbiologists and Chemists thoroughly trained in Mold and Mycotoxin analysis. No need to worry about "False Positives" from Dairyland Laboratories. Furthermore, we do not send samples out or "subcontract" our mycotoxin testing to other labs. Dairyland's "Thin Layer Chromatography" is the preferred method for mycotoxin analysis on forages such as Corn Silage, Haylage and TMRs.

Please contact us if you have any questions or would like additional information regarding Molds and Mycotoxin
